Moss is actively seeking Solar Field Engineer Interns for Spring 2021. The Solar sector focus on renewable energy, you will have the opportunity to be in the field hands-on learning about self-perform work. The ideal candidate will be looking to grow their experience with mechanical, electrical, or quality assurance in the renewable energy sector and should be willing to relocate for 3-4 months to Georgia, Arizona, Florida.

Safety is our #1 priority! We are taking necessary steps to ensure the safety of all team members during the pandemic.

POSITION SCOPE AND ORGANIZATIONAL IMPACT

Moss' Solar Field Engineer Interns are actively involved in building complex solar power plants.

ESSENTIAL JOB DUTIES AND RESPONSIBILITIES

- The duties of a field engineer include: piles production, racking-system erection, PV panel installation, electrical infrastructure – both above and below ground, quality assurance and control and more.
- The Solar Intern will be interacting with local authorities during the permitting phase
- Lead self-perform crews in the field and reporting projects progress to the owner/client
- Will reach out to engineers across the world for advice during the commissioning phase of the project, when it is time for the power plant to become operational
- Shadow and participate in activities in the field
- Work closely with Moss' Solar team during the building process of the solar plant

QUALIFICATIONS & ABILITIES FOR POSITION

- Actively pursuing a bachelor's degree in construction management, engineering or renewable energy/electrical engineering.
- 0 to 18 months internship experience in the construction industry
- Strong computer skills are a necessity, including familiarity with construction project management applications
- **Be available to work full-time and relocate to the jobsite**

WHY JOIN MOSS' SOLAR DIVISION

- Moss is a leader in the renewable energy field.
- Moss is ranked the #3 solar contractor in the nation, and #1 general contractor in Florida (by ENR).
- Moss has consistently been ranked a "Great Place To Work."
- Moss is actively developing innovative procedures and aggressively finding ways to improve the renewable industry.
- Moss self-performs the majority of the work. We are very hands-on. This is an experience like no other.
- Moss embraces team and work pride in all we do.
